# **Contents**

## **Preface**

## **Curriculum Map**

### **Introduction**

Objectives I-2

Oracle9*i* I-3

Oracle9*i* Application Server I-5

Oracle9*i* Database I-6

Oracle9*i*: Object Relational Database Management System I-8

Oracle Internet Platform I-9

System Development Life Cycle I-10

Data Storage on Different Media I-12

Relational Database Concept I-13

Definition of a Relational Database I-14

Data Models I-15

Entity Relationship Model I-16

Entity Relationship Modeling Conventions I-17

Relating Multiple Tables I-19

Relational Database Terminology I-20

Relational Database Properties I-21

Communicating with a RDBMS Using SQL I-22

Relational Database Management System I-23

SQL Statements I-24

Tables Used in the Course I-25

Summary I-26

### **1 Writing Basic SQL SELECT Statements**

Objectives 1-2

Capabilities of SQL SELECT Statements 1-3

Basic SELECT Statement 1-4

Selecting All Columns	1-5
Selecting Specific Columns	1-6
Writing SQL Statements	1-7
Column Heading Defaults	1-8
Arithmetic Expressions	1-9
Using Arithmetic Operators	1-10
Operator Precedence	1-11
Using Parentheses	1-13
Defining a Null Value	1-14
Null Values in Arithmetic Expressions	1-15
Defining a Column Alias	1-16
Using Column Aliases	1-17
Concatenation Operator	1-18
Using the Concatenation Operator	1-19
Literal Character Strings	1-20
Using Literal Character Strings	1-21
Duplicate Rows	1-22
Eliminating Duplicate Rows	1-23
SQL and iSQL*Plus Interaction	1-24
SQL Statements versus iSQL*Plus Commands	1-25
Overview of iSQL*Plus	1-26
Logging In to iSQL*Plus	1-27
The iSQL*Plus Environment	1-28
Displaying Table Structure	1-29
Interacting with Script Files	1-31
Summary	1-34
Practice 1 Overview	1-35

## **2 Restricting and Sorting Data**

Objectives 2-2

Limiting Rows Using a Selection 2-3

Limiting the Rows Selected 2-4

Using the WHERE Clause 2-5

Character Strings and Dates 2-6

Comparison Conditions 2-7

Using Comparison Conditions 2-8

Other Comparison Conditions 2-9

Using the BETWEEN Condition 2-10

Using the IN Condition 2-11

Using the LIKE Condition 2-12

Using the NULL Conditions 2-14

Logical Conditions 2-15

Using the AND Operator 2-16

Using the OR Operator 2-17

Using the NOT Operator 2-18

Rules of Precedence 2-19

ORDER BY Clause 2-22

Sorting in Descending Order 2-23

Sorting by Column Alias 2-24

Sorting by Multiple Columns 2-25

Summary 2-26

Practice 2 Overview 2-27

### **3 Single-Row Functions**

- Objectives 3-2
- SQL Functions 3-3
- Two Types of SQL Functions 3-4
- Single-Row Functions 3-5
- Character Functions 3-7
- Case Manipulation Functions 3-9
- Using Case Manipulation Functions 3-10
- Character-Manipulation Functions 3-11
- Using the Character-Manipulation Functions 3-12
- Number Functions 3-13
- Using the ROUND Function 3-14
- Using the TRUNC Function 3-15
- Using the MOD Function 3-16
- Working with Dates 3-17
- Arithmetic with Dates 3-19
- Using Arithmetic Operators with Dates 3-20
- Date Functions 3-21
- Using Date Functions 3-22
- Practice 3, Part 1 Overview 3-24
- Conversion Functions 3-25
- Implicit Data-Type Conversion 3-26
- Explicit Data-Type Conversion 3-28
- Using the TO\_CHAR Function with Dates 3-31
- Elements of the Date Format Model 3-32
- Using the TO\_CHAR Function with Dates 3-36

Using the TO\_CHAR Function with Numbers 3-37  
Using the TO\_NUMBER and TO\_DATE Functions 3-39  
RR Date Format 3-40  
Example of RR Date Format 3-41  
Nesting Functions 3-42  
General Functions 3-44  
NVL Function 3-45  
Using the NVL Function 3-46  
Using the NVL2 Function 3-47  
Using the NULLIF Function 3-48  
Using the COALESCE Function 3-49  
Conditional Expressions 3-51  
The CASE Expression 3-52  
Using the CASE Expression 3-53  
The DECODE Function 3-54  
Using the DECODE Function 3-55  
Summary 3-57  
Practice 3, Part 2 Overview 3-58

#### **4 Displaying Data from Multiple Tables**

Objectives 4-2  
Obtaining Data from Multiple Tables 4-3  
Cartesian Products 4-4  
Generating a Cartesian Product 4-5  
Types of Joins 4-6  
Joining Tables Using Oracle Syntax 4-7

What Is an Equijoin? 4-8  
Retrieving Records with Equijoins 4-9  
Additional Search Conditions Using the AND Operator 4-10  
Qualifying Ambiguous Column Names 4-11  
Using Table Aliases 4-12  
Joining More than Two Tables 4-13  
Nonequijoins 4-14  
Retrieving Records with Nonequijoins 4-15  
Outer Joins 4-16  
Outer Joins Syntax 4-17  
Using Outer Joins 4-18  
Self Joins 4-19  
Joining a Table to Itself 4-20  
Practice 4, Part 1 Overview 4-21  
Joining Tables Using SQL: 1999 Syntax 4-22  
Creating Cross Joins 4-23  
Creating Natural Joins 4-24  
Retrieving Records with Natural Joins 4-25  
Creating Joins with the USING Clause 4-26  
Retrieving Records with the USING Clause 4-27  
Creating Joins with the ON Clause 4-28  
Retrieving Records with the ON Clause 4-29  
Creating Three-Way Joins with the ON Clause 4-30  
INNER versus OUTER Joins 4-31  
LEFT OUTER JOIN 4-32  
RIGHT OUTER JOIN 4-33

FULL OUTER JOIN 4-34  
Additional Conditions 4-35  
Summary 4-36  
Practice 4, Part 2 Overview 4-37

## **5 Aggregating Data Using Group Functions**

Objectives 5-2  
What Are Group Functions? 5-3  
Types of Group Functions 5-4  
Group Functions Syntax 5-5  
Using the AVG and SUM Functions 5-6  
Using the MIN and MAX Functions 5-7  
Using the COUNT Function 5-8  
Using the DISTINCT Keyword 5-10  
Group Functions and Null Values 5-11  
Using the NVL Function with Group Functions 5-12  
Creating Groups of Data 5-13  
Creating Groups of Data: GROUP BY Clause Syntax 5-14  
Using the GROUP BY Clause 5-15  
Grouping by More Than One Column 5-17  
Using the GROUP BY Clause on Multiple Columns 5-18  
Illegal Queries Using Group Functions 5-19  
Excluding Group Results 5-21  
Excluding Group Results: The HAVING Clause 5-22  
Using the HAVING Clause 5-23  
Nesting Group Functions 5-25  
Summary 5-26  
Practice 5 Overview 5-27

## **6 Subqueries**

- Objectives 6-2
- Using a Subquery to Solve a Problem 6-3
- Subquery Syntax 6-4
- Using a Subquery 6-5
- Guidelines for Using Subqueries 6-6
- Types of Subqueries 6-7
- Single-Row Subqueries 6-8
- Executing Single-Row Subqueries 6-9
- Using Group Functions in a Subquery 6-10
- The HAVING Clause with Subqueries 6-11
- What Is Wrong with This Statement? 6-12
- Will This Statement Return Rows? 6-13
- Multiple-Row Subqueries 6-14
- Using the ANY Operator in Multiple-Row Subqueries 6-15
- Using the ALL Operator in Multiple-Row Subqueries 6-16
- Null Values in a Subquery 6-17
- Summary 6-18
- Practice 6 Overview 6-19

## **7 Producing Readable Output with iSQL\*Plus**

- Objectives 7-2
- Substitution Variables 7-3
- Using the & Substitution Variable 7-5
- Character and Date Values with Substitution Variables 7-7
- Specifying Column Names, Expressions, and Text 7-8

Defining Substitution Variables 7-10  
DEFINE and UNDEFINE Commands 7-11  
Using the DEFINE Command with & Substitution Variable 7-12  
Using the VERIFY Command 7-14  
Customizing the iSQL\*Plus Environment 7-15  
SET Command Variables 7-16  
iSQL\*Plus Format Commands 7-17  
The COLUMN Command 7-18  
Using the COLUMN Command 7-19  
COLUMN Format Models 7-20  
Using the BREAK Command 7-21  
Using the TTITLE and BTITLE Commands 7-22  
Creating a Script File to Run a Report 7-23  
Sample Report 7-25  
Summary 7-26  
Practice 7 Overview 7-27

## **8 Manipulating Data**

Objectives 8-2  
Data Manipulation Language 8-3  
Adding a New Row to a Table 8-4  
The INSERT Statement Syntax 8-5  
Inserting New Rows 8-6  
Inserting Rows with Null Values 8-7  
Inserting Special Values 8-8  
Inserting Specific Date Values 8-9

Creating a Script	8-10
Copying Rows from Another Table	8-11
Changing Data in a Table	8-12
The UPDATE Statement Syntax	8-13
Updating Rows in a Table	8-14
Updating Two Columns with a Subquery	8-15
Updating Rows Based on Another Table	8-16
Updating Rows: Integrity Constraint Error	8-17
Removing a Row from a Table	8-18
The DELETE Statement	8-19
Deleting Rows from a Table	8-20
Deleting Rows Based on Another Table	8-21
Deleting Rows: Integrity Constraint Error	8-22
Using a Subquery in an INSERT Statement	8-23
Using the WITH CHECK OPTION Keyword on DML Statements	8-25
Overview of the Explicit Default Feature	8-26
Using Explicit Default Values	8-27
The MERGE Statement	8-28
MERGE Statement Syntax	8-29
Merging Rows	8-30
Database Transactions	8-32
Advantages of COMMIT and ROLLBACK Statements	8-34
Controlling Transactions	8-35
Rolling Back Changes to a Marker	8-36
Implicit Transaction Processing	8-37
State of the Data Before COMMIT or ROLLBACK	8-38
State of the Data After COMMIT	8-39

Committing Data 8-40  
State of the Data After ROLLBACK 8-41  
Statement-Level Rollback 8-42  
Read Consistency 8-43  
Implementation of Read Consistency 8-44  
Locking 8-45  
Implicit Locking 8-46  
Summary 8-47  
Practice 8 Overview 8-48

## **9 Creating and Managing Tables**

Objectives 9-2  
Database Objects 9-3  
Naming Rules 9-4  
The CREATE TABLE Statement 9-5  
Referencing Another User's Tables 9-6  
The DEFAULT Option 9-7  
Creating Tables 9-8  
Tables in the Oracle Database 9-9  
Querying the Data Dictionary 9-10  
Data Types 9-11  
Datetime Data Types 9-13  
TIMESTAMP WITH TIME ZONE Data Type 9-15  
TIMESTAMP WITH LOCAL TIME Data Type 9-16  
INTERVAL YEAR TO MONTH Data Type 9-17  
Creating a Table by Using a Subquery Syntax 9-18

Creating a Table by Using a Subquery	9-19
The ALTER TABLE Statement	9-20
Adding a Column	9-22
Modifying a Column	9-24
Dropping a Column	9-25
The SET UNUSED Option	9-26
Dropping a Table	9-27
Changing the Name of an Object	9-28
Truncating a Table	9-29
Adding Comments to a Table	9-30
Summary	9-31
Practice 9 Overview	9-32

## **10 Including Constraints**

Objectives	10-2
What Are Constraints?	10-3
Constraint Guidelines	10-4
Defining Constraints	10-5
The NOT NULL Constraint	10-7
The UNIQUE Constraint	10-9
The PRIMARY KEY Constraint	10-11
The FOREIGN KEY Constraint	10-13
FOREIGN KEY Constraint Keywords	10-15
The CHECK Constraint	10-16
Adding a Constraint Syntax	10-17
Adding a Constraint	10-18
Dropping a Constraint	10-19

Disabling Constraints 10-20  
Enabling Constraints 10-21  
Cascading Constraints 10-22  
Viewing Constraints 10-24  
Viewing the Columns Associated with Constraints 10-25  
Summary 10-26  
Practice 10 Overview 10-27

## **11 Creating Views**

Objectives 11-2  
Database Objects 11-3  
What Is a View? 11-4  
Why Use Views? 11-5  
Simple Views and Complex Views 11-6  
Creating a View 11-7  
Retrieving Data from a View 11-10  
Querying a View 11-11  
Modifying a View 11-12  
Creating a Complex View 11-13  
Rules for Performing DML Operations on a View 11-14  
Using the WITH CHECK OPTION Clause 11-17  
Denying DML Operations 11-18  
Removing a View 11-20  
Inline Views 11-21  
Top-n Analysis 11-22  
Performing Top-n Analysis 11-23

Example of Top-n Analysis 11-24

Summary 11-25

Practice 11 Overview 11-26

## **12 Other Database Objects**

Objectives 12-2

Database Objects 12-3

What Is a Sequence? 12-4

The CREATE SEQUENCE Statement Syntax 12-5

Creating a Sequence 12-6

Confirming Sequences 12-7

NEXTVAL and CURRVAL Pseudocolumns 12-8

Using a Sequence 12-10

Modifying a Sequence 12-12

Guidelines for Modifying a Sequence 12-13

Removing a Sequence 12-14

What Is an Index? 12-15

How Are Indexes Created? 12-16

Creating an Index 12-17

When to Create an Index 12-18

When Not to Create an Index 12-19

Confirming Indexes 12-20

Function-Based Indexes 12-21

Removing an Index 12-22

Synonyms 12-23

Creating and Removing Synonyms 12-24

Summary 12-25

Practice 12 Overview 12-26

## **13 Controlling User Access**

Objectives 13-2

Controlling User Access 13-3

Privileges 13-4

System Privileges 13-5

Creating Users 13-6

User System Privileges 13-7

Granting System Privileges 13-8

What Is a Role? 13-9

Creating and Granting Privileges to a Role 13-10

Changing Your Password 13-11

Object Privileges 13-12

Granting Object Privileges 13-14

Using the WITH GRANT OPTION and PUBLIC Keywords 13-15

Confirming Privileges Granted 13-16

How to Revoke Object Privileges 13-17

Revoking Object Privileges 13-18

Database Links 13-19

Summary 13-21

Practice 13 Overview 13-22

## **14 SQL Workshop Workshop Overview**

Workshop Overview 14-2

## **15 Using SET Operators**

Objectives 15-2  
The SET Operators 15-3  
Tables Used in This Lesson 15-4  
The UNION SET Operator 15-7  
Using the UNION Operator 15-8  
The UNION ALL Operator 15-10  
Using the UNION ALL Operator 15-11  
The INTERSECT Operator 15-12  
Using the INTERSECT Operator 15-13  
The MINUS Operator 15-14  
SET Operator Guidelines 15-16  
The Oracle Server and SET Operators 15-17  
Matching the SELECT Statements 15-18  
Controlling the Order of Rows 15-20  
Summary 15-21  
Practice 15 Overview 15-22

## **16 Oracle 9*i* Datetime Functions**

Objectives 16-2  
TIME ZONES 16-3  
Oracle 9*i* Datetime Support 16-4  
CURRENT\_DATE 16-6  
CURRENT\_TIMESTAMP 16-7  
LOCALTIMESTAMP 16-8  
DBTIMEZONE and SESSIONTIMEZONE 16-9

EXTRACT 16-10  
FROM\_TZ 16-11  
TO\_TIMESTAMP and TO\_TIMESTAMP\_TZ 16-12  
TO\_YMINTERVAL 16-13  
TZ\_OFFSET 16-14  
Summary 16-16  
Practice 16 Overview 16-17

## **17 Enhancements to the GROUP BY Clause**

Objectives 17-2  
Review of Group Functions 17-3  
Review of the GROUP BY Clause 17-4  
Review of the HAVING Clause 17-5  
GROUP BY with ROLLUP and CUBE Operators 17-6  
ROLLUP Operator 17-7  
ROLLUP Operator Example 17-8  
CUBE Operator 17-9  
CUBE Operator: Example 17-10  
GROUPING Function 17-11  
GROUPING Function: Example 17-12  
GROUPING SETS 17-13  
GROUPING SETS: Example 17-15  
Composite Columns 17-17  
Composite Columns: Example 17-19  
Concatenated Groupings 17-21

Concatenated Groupings Example 17-22

Summary 17-23

Practice 17 Overview 17-24

## **18 Advanced Subqueries**

Objectives 18-2

What Is a Subquery? 18-3

Subqueries 18-4

Using a Subquery 18-5

Multiple-Column Subqueries 18-6

Column Comparisons 18-7

Pairwise Comparison Subquery 18-8

Nonpairwise Comparison Subquery 18-9

Using a Subquery in the FROM Clause 18-10

Scalar Subquery Expressions 18-11

Correlated Subqueries 18-14

Using Correlated Subqueries 18-16

Using the EXISTS Operator 18-18

Using the NOT EXISTS Operator 18-20

Correlated UPDATE 18-21

Correlated DELETE 18-24

The WITH Clause 18-26

WITH Clause: Example 18-27

Summary 18-29

Practice 18 Overview 18-31

## **19 Hierarchical Retrieval**

Objectives 19-2  
Sample Data from the EMPLOYEES Table 19-3  
Natural Tree Structure 19-4  
Hierarchical Queries 19-5  
Walking the Tree 19-6  
Walking the Tree: From the Bottom Up 19-8  
Walking the Tree: From the Top Down 19-9  
Ranking Rows with the LEVEL Pseudocolumn 19-10  
Formatting Hierarchical Reports Using LEVEL and LPAD 19-11  
Pruning Branches 19-13  
Summary 19-14  
Practice 19 Overview 19-15

## **20 Oracle 9*i* Extensions to DML and DDL Statements**

Objectives 20-2  
Review of the INSERT Statement 20-3  
Review of the UPDATE Statement 20-4  
Overview of Multitable INSERT Statements 20-5  
Types of Multitable INSERT Statements 20-7  
Multitable INSERT Statements 20-8  
Unconditional INSERT ALL 20-10  
Conditional INSERT ALL 20-11  
Conditional FIRST INSERT 20-13  
Pivoting INSERT 20-15  
External Tables 20-18

Creating an External Table 20-19  
Example of Creating an External Table 20-20  
Querying External Tables 20-23  
CREATE INDEX with CREATE TABLE Statement 20-24  
Summary 20-25  
Practice 20 Overview 20-26

- A Practice Solutions**
- B Table Descriptions and Data**
- C Using SQL\* Plus**
- D Writing Advanced Scripts**
- E Oracle Architectural Components**

**Index**

**Additional Practices**

**Additional Practice Solutions**

**Table and Descriptions**

---

## **Additional Practices**

---

These exercises can be used for extra practice after you have discussed the following topics: basic SQL SELECT statement, basic iSQL\*Plus commands, and SQL functions.

1. Show all data of the clerks who have been hired after the year 1997.

EMPLOYEE_ID	FIRST_NAME	LAST_NAME	EMAIL	PHONE_NUMBER	HIRE_DATE
143	Randall	Matos	RMATOS	650.121.2874	15-MAR-96
144	Peter	Vargas	PVARGAS	650.121.2004	09-JUL-98

2. Show the last name, job, salary, and commission of those employees who earn commission. Sort the data by the salary in descending order.

LAST_NAME	JOB_ID	SALARY	COMMISSION_PCT
Abel	SA_REP	11000	.3
Zlotkey	SA_MAN	10500	.2
Taylor	SA_REP	8600	.2
Grant	SA_REP	7000	.15

3. Show the employees that have no commission with a 10% raise in their salary (round off the salaries).

New salary
The salary of King after a 10% raise is 26400
The salary of Kochhar after a 10% raise is 18700
The salary of De Haan after a 10% raise is 18700
The salary of Hunold after a 10% raise is 9900
The salary of Ernst after a 10% raise is 6600
The salary of Lorentz after a 10% raise is 4620
The salary of Mourgos after a 10% raise is 6380
The salary of Rajs after a 10% raise is 3850
The salary of Davies after a 10% raise is 3410
The salary of Matos after a 10% raise is 2860
The salary of Vargas after a 10% raise is 2750
The salary of Whalen after a 10% raise is 4840
The salary of Hartstein after a 10% raise is 14300
The salary of Fay after a 10% raise is 6600
New salary
The salary of Higgins after a 10% raise is 13200
The salary of Gietz after a 10% raise is 9130

16 rows selected.

4. Show the last names of all employees together with the number of years and the number of completed months that they have been employed.

LAST_NAME	YEARS	MONTHS
King	13	9
Kochhar	11	5
De Haan	8	2
Hunold	11	2
Ernst	9	9
Lorentz	2	1
Mourgos	1	4
Rajs	5	5
Davies	4	1
Matos	3	0
Gietz	b	9

20 rows selected.

5. Show those employees that have a name starting with *J, K, L, or M*.

LAST_NAME
King
Kochhar
Lorentz
Mourgos
Matos

6. Show all employees, and indicate with “Yes” or “No” whether they receive a commission.

LAST_NAME	SALARY	COM
King	24000	No
Kochhar	17000	No
De Haan	17000	No
Hunold	9000	No
Ernst	6000	No
Lorentz	4200	No
Mourgos	5800	No
Rajs	3500	No

(Note: results continued on next page)

Davies	3100	No
Matos	2600	No
Vargas	2500	No
Zlotkey	10500	Yes
Abel	11000	Yes
Taylor	8600	Yes
LAST_NAME	SALARY	COM
Grant	7000	Yes
Whalen	4400	No
Hartstein	13000	No
Fay	6000	No
Higgins	12000	No
Gietz	8300	No

20 rows selected.

These exercises can be used for extra practice after you have discussed the following topics: SQL basic SELECT statement, basic iSQL\*Plus commands, SQL functions, joins, and group functions.

7. Show the department names, locations, names, job titles, and salaries of employees who work in location 1800.

DEPARTMENT_NAME	LOCATION_ID	LAST_NAME	JOB_ID	SALARY
Marketing	1800	Hartstein	MK_MAN	13000
Marketing	1800	Fay	MK_REP	6000

8. How many employees have a name that ends with an “n”? Create two possible solutions.

COUNT(*)
3

3

9. Show the names and locations for all departments, and the number of employees working in each department. Make sure that departments without employees are included as well.

DEPARTMENT_ID	DEPARTMENT_NAME	LOCATION_ID	COUNT(E.EMPLOYEE_ID)
10	Administration	1700	1
20	Marketing	1800	2
50	Shipping	1500	5
60	IT	1400	3

8 rows selected.

10. Which jobs are found in departments 10 and 20?

JOB_ID
AD_ASST
MK_MAN
MK_REP

11. Which jobs are found in the Administration and Executive departments, and how many employees do these jobs? Show the job with the highest frequency first.

JOB_ID	FREQUENCY
AD_VP	2
AD_ASST	1
AD_PRES	1

These exercises can be used for extra practice after you have discussed the following topics: basic SQL SELECT statements, basic iSQL\*Plus commands, SQL functions, joins, group functions, subqueries.

12. Show all employees who were hired in the first half of the month (before the 16th of the month).

LAST_NAME	HIRE_DATE
De Haan	13-JAN-93
Hunold	03-JAN-90
Lorentz	07-FEB-99
Matos	15-MAR-98
Vargas	09-JUL-98
Abel	11-MAY-96
Higgins	07-JUN-94
Gietz	07-JUN-94

8 rows selected.

13. Show the names, salaries, and the number of dollars (in thousands) that all employees earn.

LAST_NAME	SALARY	THOUSANDS
King	24000	24
Kochhar	17000	17
De Haan	17000	17
Hunold	9000	9
Ernst	6000	6
Lorentz	4200	4
Mourgos	5800	5

(Note: Results continue on the next page)

Rajs	3500	3

Rajs	October 17
Mourgos	November 16

20 rows selected.

These exercises can be used for extra practice after you have discussed using SET operators in Lesson 15.

21. Find the job that was filled in the first half of 1990 and the same job that was filled during the same period in 1991.

JOB_ID
IT_PROG

22. Write a compound query to produce a list of employees showing raise percentages, employee IDs, and old and new salaries. Employees in departments 10, 50, and 110 are given a 5% raise, employees in department 60 are given a 10% raise, employees in departments 20 and 80 are given a 15% raise, and employees in department 90 are not given a raise.

RAISE	EMPLOYEE_ID	SALARY	NEW_SALARY
05% raise	124	5800	290
05% raise	141	3500	175
05% raise	142	3100	155
05% raise	143	2600	130
05% raise	144	2500	125
05% raise	200	4400	220
05% raise	205	12000	600
05% raise	206	8300	415
10% raise	103	9000	900
10% raise	104	6000	600
10% raise	107	4200	420
15% raise	149	10500	1575
15% raise	174	11000	1650
15% raise	176	8600	1290
15% raise	201	13000	1950
15% raise	202	6000	900
no raise	100	24000	24000
no raise	101	17000	17000
no raise	102	17000	17000

19 rows selected.

These exercises can be used for extra practice after you have discussed Oracle9*i* single row functions in Lesson 16.

23. Alter the session to set the NLS\_DATE\_FORMAT to DD-MON-YYYY HH24:MI:SS.
24. a. Write queries to display the time zone offsets (TZ\_OFFSET) for the following time zones.  
-Australia/Sydney

TZ_OFFSET
+11:00

-Chile/EasterIsland

TZ_OFFSET
-05:00

- b. Alter the session to set the TIME\_ZONE parameter value to the time zone offset of Australia/Sydney.
- c. Display the SYSDATE, CURRENT\_DATE, CURRENT\_TIMESTAMP, and LOCALTIMESTAMP for this session. **Note:** The output might be different based on the date when the command is executed.

SYSDATE	CURRENT_DATE	CURRENT_TIMESTAMP	LOCALTIMESTAMP
09-MAR-2001 11:18:46	09-MAR-2001 16:48:46	09-MAR-01 04.48.46.183047 PM +11:00	09-MAR-01 04.48.46.183047 PM

- d. Alter the session to set the TIME\_ZONE parameter value to the time zone offset of Chile/EasterIsland.

**Note:** The results of the preceding question are based on a different date and in some cases they will not match the actual results that the students get. Also the time zone offset of the various countries might differ based on daylight savings time.

- e. Display the SYSDATE , CURRENT\_DATE, CURRENT\_TIMESTAMP, and LOCALTIMESTAMP for this session. **Note:** The output might be different based on the date when the command is executed.

SYSDATE	CURRENT_DATE	CURRENT_TIMESTAMP	LOCALTIMESTAMP
09-MAR-2001 11:20:26	09-MAR-2001 00:50:27	09-MAR-01 12.50.26.718257 AM -05:00	09-MAR-01 12.50.26.718257 AM

**Note:** Observe in the preceding question that CURRENT\_DATE, CURRENT\_TIMESTAMP, and LOCALTIMESTAMP are all sensitive to the session time zone. Observe that SYSDATE is not sensitive to the session time zone.

**Note:** The results of the preceding question are based on a different date, and in some cases they will not match the actual results that the students get. Also the time zone offset of the various countries might differ based on daylight savings time.

25. Write a query to display the last names, month of the date of join, and hire date of those employees who have joined in the month of January, irrespective of the year of join.

LAST_NAME	EXTRACT(MONTHFROMHIRE_DATE)	HIRE_DATE
De Haan	1	13-JAN-1993 00:00:00
Hunold	1	03-JAN-1990 00:00:00
Davies	1	29-JAN-1997 00:00:00
Zlotkey	1	29-JAN-2000 00:00:00

These exercises can be used for extra practice after you have discussed enhancements to the GROUP BY clause in Lesson 17.

26. Write a query to display the following for those departments whose department ID is greater than 80 :

- The total salary for every job within a department
- The total salary
- The total salary for those cities in which the departments are located
- The total salary for every job, irrespective of the department
- The total salary for every department irrespective of the city
- The total salary of the cities in which the departments are located
- Total salary for the departments, irrespective of job titles and cities

CITY	DNAME	JOB	SUM(SALARY)
Seattle	Accounting	AC_ACCOUNT	\$33,200.00
Seattle	Accounting	AC_MGR	\$48,000.00
Seattle	Accounting		\$81,200.00
Seattle	Executive	AD_PRES	\$96,000.00
Seattle	Executive	AD_VP	\$1,36,000.00
Seattle	Executive		\$2,32,000.00
Seattle		AC_ACCOUNT	\$33,200.00
Seattle		AC_MGR	\$48,000.00

Seattle			\$3,13,200.00
	Accounting	AC_ACCOUNT	\$33,200.00
	Accounting	AC_MGR	\$48,000.00
	Accounting		\$81,200.00
	Executive	AD_PRES	\$96,000.00
	Executive	AD_VP	\$1,36,000.00
	Executive		\$2,32,000.00
		AC_ACCOUNT	\$33,200.00
		AC_MGR	\$48,000.00
		AD_PRES	\$96,000.00
		AD_VP	\$1,36,000.00
			\$3,13,200.00

22 rows selected.

27. Write a query to display the following groupings :

- Department ID, Job ID
- Job ID, Manager ID

The query should calculate the maximum and minimum salaries for each of these groups.

DEPARTMENT_ID	JOB	MANAGER_ID	MAX(SALARY)	MIN(SALARY)
10	AD_ASST		4400	4400
20	MK_MAN		13000	13000
20	MK_REP		6000	6000
50	ST_CLERK		3500	2500
50	ST_MAN		5800	5800
60	IT_PROG		9000	4200
80	SA_MAN		10500	10500
80	SA_REP		11000	8600
90	AD_PRES		24000	24000
90	AD_VP		17000	17000
110	AC_ACCOUNT		8300	8300
110	AC_MGR		12000	12000
	SA_REP		7000	7000
	AC_ACCOUNT	205	8300	8300
	AC_MGR	101	12000	12000
	AD_ASST	101	4400	4400
	AD_PRES		24000	24000
	AD_VP	100	17000	17000
	IT_PROG	102	9000	9000
	IT_PROG	103	6000	4200
	MK_MAN	100	13000	13000
	MK_REP	201	6000	6000
	SA_MAN	100	10500	10500
	SA_REP	149	11000	7000
	ST_CLERK	124	3500	2500
	ST_MAN	100	5800	5800

26 rows selected.

These exercises can be used for extra practice after you have discussed advanced subqueries in Lesson 18.

28. Write a query to display the top three earners in the EMPLOYEES table. Display their last names and salaries.

LAST_NAME	SALARY
King	24000
Kochhar	17000
De Haan	17000

29. Write a query to display the employee ID and last names of the employees who work in the state of California.

**Hint:** Use scalar subqueries.

EMPLOYEE_ID	LAST_NAME
124	Mourgos
141	Rajs
142	Davies
143	Matos
144	Vargas

30. Write a query to delete the oldest JOB\_HISTORY row of an employee by looking up the JOB\_HISTORY table for the MIN(START\_DATE) for the employee. Delete the records of **only** those employees who have changed at least 2 jobs. If your query has executed correctly, you will get the feedback:

3 rows deleted.

**Hint:** Use a correlated DELETE.

31. Rollback the transaction.

32. Write a query to display the job ids of those jobs whose maximum salary is above half the maximum salary in the whole company. Use the WITH clause to write this query. Name the query as MAX\_SAL\_CALC.

JOB_TITLE	JOB_TOTAL
President	24000
Administration Vice President	17000
Marketing Manager	13000

These exercises can be used for extra practice after you have discussed hierachial retrieval in Lesson 19.

33. Write a SQL statement to display employee number, last name, start date, and salary, showing:

- a. De Haan's direct reports

EMPLOYEE_ID	LAST_NAME	HIRE_DATE	SALARY
103	Hunold	03-JAN-1990 00:00:00	9000

- b. The organization tree under De Haan's (employee number 102)

EMPLOYEE_ID	LAST_NAME	HIRE_DATE	SALARY
103	Hunold	03-JAN-1990 00:00:00	9000
104	Ernst	21-MAY-1991 00:00:00	6000
107	Lorentz	07-FEB-1999 00:00:00	4200

34. Write a hierarchical query to display the employee number, manager number, and employee last name for all employees who are two levels below employee De Haan (employee number 102). Also display the level of the employee.

EMPLOYEE_ID	MANAGER_ID	LEVEL	LAST_NAME
104	103	3	Ernst
107	103	3	Lorentz

35. Produce a hierarchical report to display the employee number, manager number, the LEVEL pseudocolumn, and employee last name. For every row in the EMPLOYEES table, you should print a tree structure showing the employee, the employee's manager, then the manager's manager, and so on. Use indentations for the NAME column.

EMPLOYEE_ID	MANAGER_ID	LEVEL	LPAD(LAST_NAME,LENGTH(LAST_NAME)+(LEVEL*2)-2,'_')
100		1	King
101	100	1	Kochhar
100		2	_King
102	100	1	De Haan
100		2	_King
103	102	1	Hunold
102	100	2	_De Haan
100		3	___King
104	103	1	Ernst

100		4	_____King
107	103	1	Lorentz
103	102	2	Hunold
201	100	2	Hartstein
100		3	___King
205	101	1	Higgins
101	100	2	Kochhar
100		3	___King
206	205	1	Gietz
205	101	2	Higgins
101	100	3	Kochhar
100		4	_____King

56 rows selected.

**Note:** The output shown is only a sample. All the rows from the actual output are not included here.

These exercises can be used for extra practice after you have discussed Oracle 9*i* extensions to DML and DDL statements in Lesson 20.

36. Write a query to do the following:

- Retrieve the details of the employee ID, hire date, salary, and manager ID of those employees whose employee ID is more than or equal to 200 from the EMPLOYEES table.
- If the salary is less than \$5,000, insert the details of employee ID and salary into the SPECIAL\_SAL table.
- Insert the details of employee ID, hire date, and salary into the SAL\_HISTORY table.
- Insert the details of employee ID, manager ID, and salary into the MGR\_HISTORY table.

37. Query the SPECIAL\_SAL, SAL\_HISTORY and the MGR\_HISTORY tables to view the inserted records.

**SPECIAL\_SAL Table**

EMPLOYEE_ID	SALARY
200	4400

**SAL\_HISTORY Table**

EMPLOYEE_ID	HIRE_DATE	SALARY
201	17-FEB-1996 00:00:00	13000
202	17-AUG-1997 00:00:00	6000
205	07-JUN-1994 00:00:00	12000
206	07-JUN-1994 00:00:00	8300

**MGR\_HISTORY Table**

EMPLOYEE_ID	MANAGER_ID	SALARY
201	100	13000
202	201	6000
205	101	12000
206	205	8300

38. Create the LOCATIONS\_NAMED\_INDEX table based on the following table instance chart.  
Name the index for the PRIMARY KEY column as LOCATIONS\_PK\_IDX.

COLUMN Name	Deptno	Dname
Primary Key	Yes	
Datatype	Number	VARCHAR2
Length	4	30

39. Query the USER\_INDEXES table to display the INDEX\_NAME for the LOCATIONS\_NAMED\_INDEX table.

INDEX_NAME	TABLE_NAME
LOCATIONS_PK_IDX	LOCATIONS_NAMED_INDEX

This exercise can be used for extra practice after you have discussed writing advanced scripts in Appendix D.

## Appendix D Additional Practice

Write a SQL script file to drop all objects (tables, views, indexes, sequences, synonyms, and so on) that you own. The output shown is only a guideline.

```
DROP INDEX COUNTRY_C_ID_PK;  
DROP INDEX DEPT_ID_PK;  
DROP INDEX DEPT_LOCATION_IX;  
DROP INDEX EMP_EMAIL_UK;  
DROP INDEX EMP_MANAGER_IX;  
DROP INDEX EMP_JOB_IX;  
DROP INDEX EMP_EMP_ID_PK;  
DROP INDEX EMP_DEPARTMENT_IX;  
DROP INDEX EMP_NAME_IX;  
DROP INDEX REG_ID_PK;  
DROP INDEX LOC_STATE_PROVINCE_IX;
```

```
DROP TABLE HIREDATE_HISTORY_00;  
DROP TABLE HIREDATE_HISTORY_99;  
DROP TABLE HIREDATE_HISTORY;  
DROP TABLE EMPHISTORY;  
DROP TABLE EMPLOYEES;  
DROP VIEW EMP_DETAILS_VIEW;
```

---

**Additional  
Practice  
Solutions**

---

These exercises can be used for extra practice after you have discussed the following topics: basic SQL SELECT statement, basic iSQL\*Plus commands, and SQL functions.

1. Show all data of the clerks who have been hired after the year 1997.

```
SELECT *
FROM   employees
WHERE  job_id = 'ST_CLERK'
AND    hire_date > '31-DEC-1997';
```

2. Show the last name, job, salary, and commission of those employees who earn commission. Sort the data by the salary in descending order.

```
SELECT last_name, job_id, salary, commission_pct
FROM   employees
WHERE  commission_pct IS NOT NULL
ORDER BY salary DESC;
```

3. Show the employees that have no commission with a 10% raise intheir salary (round off the salaries).

```
SELECT 'The salary of '||last_name||' after a 10% raise is '
      || ROUND(salary*1.10) "New salary"
FROM   employees
WHERE  commission_pct IS NULL;
```

4. Show the last names of all employees together with the number of years and the number of completed months that they have been employed.

```
SELECT last_name,
       TRUNC(MONTHS_BETWEEN(SYSDATE, hire_date) / 12) YEARS,
       TRUNC(MOD(MONTHS_BETWEEN(SYSDATE, hire_date), 12)) MONTHS
FROM     employees;
```

5. Show those employees that have a name starting with *J*, *K*, *L*, or *M*.

```
SELECT last_name
FROM   employees
WHERE  SUBSTR(last_name, 1,1) IN ('J', 'K', 'L', 'M');
```

6. Show all employees, and indicate with “Yes” or “No” whether they receive a commission.

```
SELECT last_name, salary,
       decode(commission_pct, NULL, 'No', 'Yes') commission
  FROM employees;
```

These exercises can be used for extra practice after you have discussed the following topics: SQL basic SELECT statement, basic iSQL\*Plus commands, SQL functions, joins, and group functions.

7. Show the department names, locations, names, job titles, and salaries of employees who work in location 1800.

```
SELECT d.department_name, d.location_id,
       e.last_name, e.job_id, e.salary
  FROM employees e, departments d
 WHERE e.department_id = d.department_id
   AND d.location_id = 1800;
```

8. How many employees have a name that ends with an *n*? Create two possible solutions.

```
SELECT COUNT(*)
  FROM employees
 WHERE last_name LIKE '%n';

SELECT COUNT(*)
  FROM employees
 WHERE SUBSTR(last_name, -1) = 'n';
```

9. Show the names and locations for all departments and the number of employees working in each department. Make sure that departments without employees are included, as well.

```
SELECT d.department_id, d.department_name,
       d.location_id, COUNT(e.employee_id)
  FROM employees e, departments d
 WHERE e.department_id(+) = d.department_id
 GROUP BY d.department_id, d.department_name, d.location_id;
```

10. Which jobs are found in departments 10 and 20?

```
SELECT DISTINCT job_id
FROM employees
WHERE department_id IN (10, 20);
```

11. Which jobs are found in the Administration and Executive departments, and how many employees do these jobs? Show the job with the highest frequency first.

```
SELECT e.job_id, count(e.job_id) FREQUENCY
FROM employees e, departments d
WHERE e.department_id = d.department_id
AND d.department_name IN ('Administration', 'Executive')
GROUP BY e.job_id
ORDER BY FREQUENCY DESC;
```

These exercises can be used for extra practice after you have discussed the following topics: basic SQL SELECT statements, basic iSQL\*Plus commands, SQL functions, joins, group functions, subqueries.

12. Show all employees who were hired in the first half of the month (before the 16th of the month).

```
SELECT last_name, hire_date
FROM employees
WHERE TO_CHAR(hire_date, 'DD') < 16;
```

13. Show the names, salaries, and the number of dollars (in thousands) that all employees earn.

```
SELECT last_name, salary, TRUNC(salary, -3)/1000 Thousands
FROM employees;
```

14. Show all employees who have managers with a salary higher than \$15,000. Show the following data: employee name, manager name, manager salary, and salary grade of the manager.

```
SELECT e.last_name, m.last_name manager, m.salary,
j.grade_level
FROM employees e, employees m, job_grades j
WHERE e.manager_id = m.employee_id
AND m.salary BETWEEN j.lowest_sal AND j.highest_sal
AND m.salary > 15000;
```

15. Show the department number, name, number of employees, and average salary of all departments, together with the names, salaries, and jobs of the employees working in each department.

```
BREAK ON department_id -
    ON department_name ON employees ON avg_sal SKIP 1

SELECT  d.department_id, d.department_name,
        count(e1.employee_id) employees,
        NVL(TO_CHAR(AVG(e1.salary), '99999.99'), 'No average') avg_sal,
        e2.last_name, e2.salary, e2.job_id
FROM    departments d, employees e1, employees e2
WHERE   d.department_id = e1.department_id(+)
AND     d.department_id = e2.department_id(+)
GROUP BY d.department_id, d.department_name,
         e2.last_name, e2.salary, e2.job_id
ORDER BY d.department_id, employees;
```

**CLEAR BREAKS**

16. Show the department number and the lowest salary of the department with the highest average salary.

```
SELECT department_id, MIN(salary)
FROM   employees
GROUP BY department_id
HAVING AVG(salary) = (SELECT MAX(AVG(salary))
                        FROM   employees
                        GROUP BY department_id);
```

17. Show the department numbers, names, and locations of the departments where no sales representatives work.

```
SELECT *
FROM   departments
WHERE  department_id NOT IN(SELECT department_id
                            FROM   employees
                            WHERE job_id = 'SA_REP'
                            AND department_id IS NOT NULL);
```

18. Show the department number, department name, and the number of employees working in each that:

- a. Includes fewer than 3 employees:

```
SELECT d.department_id, d.department_name, COUNT(*)
FROM   departments d, employees e
WHERE  d.department_id = e.department_id
GROUP BY d.department_id, d.department_name
HAVING COUNT(*) < 3;
```

b. Has the highest number of employees:

```
SELECT d.department_id, d.department_name, COUNT(*)
FROM departments d, employees e
WHERE d.department_id = e.department_id
GROUP BY d.department_id, d.department_name
HAVING COUNT(*) = (SELECT MAX(COUNT(*))
                     FROM employees
                     GROUP BY department_id);
```

c. Has the lowest number of employees:

```
SELECT d.department_id, d.department_name, COUNT(*)
FROM departments d, employees e
WHERE d.department_id = e.department_id
GROUP BY d.department_id, d.department_name
HAVING COUNT(*) = (SELECT MIN(COUNT(*))
                     FROM employees
                     GROUP BY department_id);
```

19. Show the employee number, last name, salary, department number, and the average salary in their department for all employees.

```
SELECT e.employee_id, e.last_name,
       e.department_id, AVG(s.salary)
FROM employees e, employees s
WHERE e.department_id = s.department_id
GROUP BY e.employee_id, e.last_name, e.department_id;
```

20. Show all employees who were hired on the day of the week on which the highest number of employees has been hired.

```
SELECT last_name, TO_CHAR(hire_date, 'DAY') day
FROM employees
WHERE TO_CHAR(hire_date, 'Day') =
  (SELECT TO_CHAR(hire_date, 'Day')
   FROM employees
   GROUP BY TO_CHAR(hire_date, 'Day')
   HAVING COUNT(*) = (SELECT MAX(COUNT(*))
                      FROM employees
                      GROUP BY TO_CHAR(hire_date, 'Day')));
```

21. Create an anniversary overview based on the hire date of the employees. Sort the anniveraries in ascending order.

```
SELECT last_name, TO_CHAR(hire_date, 'Month DD') BIRTHDAY
  FROM   employees
 ORDER BY TO_CHAR(hire_date, 'DDD');
```

These exercises can be used for extra practice after you have discussed using SET operators in Lesson 15.

22. Find the job that was filled in the first half of 1990 and the same job that was filled during the same period in 1991.

```
SELECT job_id
FROM   employees
WHERE  hire_date
BETWEEN '01-JAN-1990' AND '30-JUN-1990'
INTERSECT
SELECT job_id
FROM   employees
WHERE  hire_date BETWEEN '01-JAN-1991'
AND '30-JUN-1991';
```

23. Write a compound query to produce a list of employees showing raise percentages, employee IDs, and old and new salaries. Employees in departments 10, 50, and 110 are given a 5% raise, employees in department 60 are given a 10% raise, employees in departments 20 and 80 are given a 15% raise, and employees in department 90 are not given a raise.

```
SELECT '05% raise' raise, employee_id, salary,
       salary *.05 new_salary
FROM   employees
WHERE  department_id IN (10,50, 110)
UNION
SELECT '10% raise', employee_id, salary, salary * .10
FROM   employees
WHERE  department_id = 60
UNION
SELECT '15% raise', employee_id, salary, salary * .15
FROM   employees
WHERE  department_id IN (20, 80)
UNION
SELECT 'no raise', employee_id, salary, salary
FROM   employees
WHERE  department_id = 90;
```

These exercises can be used for extra practice after you have discussed Oracle9*i* single row functions in Lesson 16.

24. Alter the session to set the NLS\_DATE\_FORMAT to DD-MON-YYYY HH24:MI:SS.

```
ALTER SESSION  
SET NLS_DATE_FORMAT = 'DD-MON-YYYY HH24:MI:SS';
```

25. a. Write queries to display the time zone offsets (TZ\_OFFSET), for the following time zones.

```
-Australia/Sydney  
TZ_OFFSETS  
-----  
+11:00  
SELECT TZ_OFFSET ('Australia/Sydney') from dual;
```

```
-Chile/EasterIsland  
TZ_OFFSETS  
-----  
-05:00  
SELECT TZ_OFFSET ('Chile/EasterIsland') from dual;
```

b. Alter the session to set the TIME\_ZONE parameter value to the time zone offset of Australia/Sydney.

```
ALTER SESSION SET TIME_ZONE = '+11:00';
```

c. Display the SYSDATE, CURRENT\_DATE, CURRENT\_TIMESTAMP, and LOCALTIMESTAMP for this session. **Note:** The output might be different based on the date when the command is executed.

```
SELECT SYSDATE, CURRENT_DATE,  
CURRENT_TIMESTAMP, LOCALTIMESTAMP  
FROM DUAL;
```

d. Alter the session to set the TIME\_ZONE parameter value to the time zone offset of Chile/EasterIsland.

```
ALTER SESSION SET TIME_ZONE = '-05:00';
```

- e. Display the SYSDATE , CURRENT\_DATE, CURRENT\_TIMESTAMP, and LOCALTIMESTAMP for this session. **Note:** The output might be different based on the date when the command is executed.

```
SELECT SYSDATE,CURRENT_DATE,  
CURRENT_TIMESTAMP, LOCALTIMESTAMP  
FROM DUAL;
```

**Note:** Observe in the preceding question that CURRENT\_DATE, CURRENT\_TIMESTAMP, and LOCALTIMESTAMP are all sensitive to the session time zone. Observe that SYSDATE is not sensitive to the session time zone.

**Note:** The results of the preceding question are based on a different date, and in some cases they will not match the actual results that the students get. Also the time zone offset of the various countries might differ based on daylight savings time.

26. Write a query to display the last names, month of the date of join, and hire date of those employees who have joined in the month of January, irrespective of the year of join.

```
SELECT last_name, EXTRACT (MONTH FROM HIRE_DATE),HIRE_DATE  
FROM employees  
WHERE EXTRACT (MONTH FROM HIRE_DATE) = 1;
```

These exercises can be used for extra practice after you have discussed enhancements to the GROUP BY clause in Lesson 17.

27. Write a query to display the following for those departments whose department ID is greater than 80:

- The total salary for every job within a department
- The total salary
- The total salary for those cities in which the departments are located
- The total salary for every job, irrespective of the department
- The total salary for every department irrespective of the city
- The total salary of the cities in which the departments are located
- Total salary for the departments, irrespective of job titles and cities

```
COLUMN city FORMAT A25 Heading CITY
COLUMN department_name FORMAT A15 Heading DNAME
COLUMN job_id FORMAT A10 Heading JOB
COLUMN SUM(salary) FORMAT $99,99,999.00 Heading SUM(SALARY)

SELECT city,department_name, job_id, SUM(salary)
FROM countries,locations,employees,departments
WHERE departments.location_id = locations.location_id
AND employees.department_id = departments.department_id
AND employees.department_id > 80
GROUP BY CUBE( city,department_name, job_id);
```

28. Write a query to display the following groupings :

- Department ID, Job ID
- Job ID, Manager ID

The query should calculate the maximum and minimum salaries for each of these groups.

```
SELECT department_id, job_id, manager_id,max(salary),min(salary)
FROM   employees
GROUP BY GROUPING SETS
((department_id,job_id), (job_id,manager_id));
```

These exercises can be used for extra practice after you have discussed advanced subqueries in Lesson 18.

29. Write a query to display the top three earners in the EMPLOYEES table. Display their last names and salaries.

```
SELECT last_name, salary
FROM   employees e
WHERE  3  > (SELECT COUNT(*)
               FROM   employees
               WHERE  e.salary < salary);
```

30. Write a query to display the employee ID and last names of the employees who work in the state of California.

**Hint:** Use scalar subqueries.

```
SELECT employee_id, last_name
FROM employees e
WHERE ((SELECT location_id
        FROM departments d
        WHERE e.department_id = d.department_id )
       IN  (SELECT location_id
             FROM locations l
             WHERE STATE_province = 'California'));
```

31. Write a query to delete the oldest JOB\_HISTORY row of an employee by looking up the JOB\_HISTORY table for the MIN(START\_DATE) for the employee. Delete the records of *only* those employees who have changed at least 2 jobs. If your query has executed correctly, you will get the following feedback:

**Hint:** Use a correlated DELETE.

```
DELETE FROM job_history JH
WHERE employee_id =
      (SELECT employee_id
       FROM employees E
       WHERE JH.employee_id = E.employee_id
       AND START_DATE = (SELECT MIN(start_date)
                          FROM job_history JH
                          WHERE JH.employee_id = E.employee_id)
       AND 3 >  (SELECT COUNT(*)
                  FROM job_history JH
                  WHERE JH.employee_id = E.employee_id
                  GROUP BY EMPLOYEE_ID
                  HAVING COUNT(*) >= 2));
```

32. Rollback the transaction.

```
ROLLBACK;
```

33. Write a query to display the job IDs of those jobs whose maximum salary is above half the maximum salary in the whole company. Use the WITH clause to write this query. Name the query as MAX\_SAL\_CALC.

```
WITH
MAX_SAL_CALC AS (
  SELECT job_title, MAX(salary) AS job_total
  FROM employees, jobs
  WHERE employees.job_id = jobs.job_id
  GROUP BY job_title)
  SELECT job_title, job_total
  FROM MAX_SAL_CALC
  WHERE job_total > (SELECT MAX(job_total) * 1/2
                      FROM MAX_SAL_CALC)
  ORDER BY job_total DESC;
```

These exercises can be used for extra practice after you have discussed hierachial retrieval in Lesson 19.

34. Write a SQL statement to display employee number, last name, start date, and salary, showing:
- De Haan's direct reports

```
SELECT employee_id, last_name, hire_date, salary
FROM   employees
WHERE  manager_id = (SELECT employee_id
                      FROM   employees
                      WHERE last_name = 'De Haan');
```

- The organization tree under De Haan's (employee number 102)

```
SELECT employee_id, last_name, hire_date, salary
FROM   employees
WHERE  employee_id != 102
CONNECT BY manager_id = PRIOR employee_id
START WITH employee_id = 102;
```

35. Write a hierarchical query to display the employee number, manager number, and employee last name for all employees who are two levels below employee De Haan (employee number 102). Also display the level of the employee.

```
SELECT employee_id, manager_id, level, last_name
FROM   employees
WHERE LEVEL = 3
CONNECT BY manager_id = PRIOR employee_id
START WITH employee_id= 102;
```

36. Produce a hierarchical report to display employee number, manager number, the LEVEL pseudocolumn, and employee last name. For every row in the EMPLOYEES table, you should print a tree structure showing the employee, the employee's manager, then the manager's manager, and so on. Use indentations for the NAME column.

```
COLUMN name FORMAT A25
SELECT employee_id, manager_id, LEVEL,
LPAD(last_name, LENGTH(last_name)+(LEVEL*2)-2, '_')
FROM employees
CONNECT BY employee_id = PRIOR manager_id;
COLUMN name CLEAR
```

These exercises can be used for extra practice after you have discussed Oracle 9*i* extensions to DML and DDL statements in Lesson 20.

37. Write a query to do the following:

- Retrieve the details of the employee ID, hire date, salary, and manager ID of those employees whose employee ID is more than or equal to 200 from the EMPLOYEES table.
- If the salary is less than \$5,000, insert the details of employee ID and salary into the SPECIAL\_SAL table.
- Insert the details of employee ID, hire date, and salary into the SAL\_HISTORY table.
- Insert the details of employee ID, manager ID, and salary into the MGR\_HISTORY table.

```
INSERT ALL
WHEN SAL < 5000 THEN
  INTO special_sal VALUES (EMPID, SAL)
ELSE
  INTO sal_history VALUES(EMPID, HIREDATE, SAL)
  INTO mgr_history VALUES(EMPID, MGR, SAL)
  SELECT employee_id EMPID, hire_date HIREDATE,
         salary SAL, manager_id MGR
FROM employees
WHERE employee_id >=200;
```

38. Query the SPECIAL\_SAL, SAL\_HISTORY and the MGR\_HISTORY tables to view the inserted records.

```
SELECT * FROM special_sal;
SELECT * FROM sal_history;
SELECT * FROM mgr_history;
```

39. Create the LOCATIONS\_NAMED\_INDEX table based on the following table instance chart.  
Name the index for the PRIMARY KEY column as LOCATIONS\_PK\_IDX.

```
CREATE TABLE LOCATIONS_NAMED_INDEX
(location_id NUMBER(4) PRIMARY KEY USING INDEX
(CREATE INDEX locations_pk_idx ON
LOCATIONS_NAMED_INDEX(location_id)),
location_name VARCHAR2(20));
```

40. Query the USER\_INDEXES table to display the INDEX\_NAME for the LOCATIONS\_NAMED\_INDEX table.

```
SELECT INDEX_NAME, TABLE_NAME
FROM USER_INDEXES
WHERE TABLE_NAME = 'LOCATIONS_NAMED_INDEX';
```

This exercise can be used for extra practice after you have discussed writing advanced scripts in Appendix D.

## Appendix D Additional Practice

Write a SQL script file to drop all objects (tables, views, indexes, sequences, synonyms, and so on) that you own. The output shown is only a guideline.

```
SET HEADING OFF ECHO OFF FEEDBACK OFF TERMOUT OFF
SET PAGESIZE 0

SPOOL dropall.sql

SELECT    'DROP ' || object_type || ' ' || object_name || ';' 
FROM      user_objects
ORDER BY object_type
/

SPOOL off

SET HEADING ON ECHO ON FEEDBACK ON TERMOUT ON
SET PAGESIZE 24
```

---

## **Table Descriptions and Data**
